

SUMMARY OF SEPTEMBER 2008 REVISIONS - VERSION 3.1.3.1

Since the release of BRADD Version 3.1.3.0, a couple of small operational issues have been reported. See E-Notification 018. This patch release of BRADD Version 3.1.3.1 contains the following revisions:

1. The Border detail placement process has been revised so that it will not inadvertently replace a slash followed by numbers (in the path- and file-names) into a special MicroStation font character. (vi:3404)
2. The MicroStation interface has been revised to work correctly with MicroStation XM. Previously, the first detail on every odd numbered sheet was blank. (vi:3405)
3. The BRADD GUI has been revised to accept only Microsoft Office XP (v10.0) and newer versions. When the BRADD GUI attempts to use Microsoft Office 2000 (v9.0) it returns a message about "Attempted to read or write protected memory". Excel and Word files generated by BRADD can still be accessed directly through Microsoft Office 2000, outside of BRADD. (vi:3419)
4. The BRADD GUI has been revised to gracefully handle a "no" response to the "Delete Previous Run Output" prompt with a blank Screen Log Window. Previously this situation would generate an "Unhandled exception" error. (vi:3397)
